ECONOMIC INTELLIGENCE STATISTICAL HANDBOOK

CIA/RR RA-12-R2 (ORR Project 00.2066)

NOTICE

This compilation was prepared primarily for use in ORR and is not a formal ORR publication. Data for the Sino-Soviet Bloc are the best estimates of ORR as of 1 April 1958.

CENTRAL INTELLIGENCE AGENCY
Office of Research and Reports

Sanitized Copy Approved for Release 2010/12/15 : CIA-RDP07-00617R000100050001-6

FOREWORD

1. Objectives and Scope.

The Economic Intelligence Statistical Handbook, 1958 (hereafter referred to as the 1958 Handbook), is a concise reference work in tabular and graphic form. The purpose of this publication is to supply data, primarily on production and inventories, which are pertinent in analyzing and comparing the economies of the countries comprising the Sino-Soviet Bloc* with those comprising the North Atlantic Treaty Organization (NATO).**

In the 1958 Handbook, total production in the countries of the Sino-Soviet Bloc is compared with that in the countries belonging to NATO during the years 1938, 1950, The previous handbook, and 1954–57. which was published in October 1957, covered the years 1938, 1950, and 1954–56. The 1958 Handbook is a revision of the data published earlier and contains data which are believed to be more reliable. A more complete series, including figures for 1946, 1958, and plans for 1960, as well as graphic presentation of these data, is included for the commodities which are considered most important as measures of economic development. Except in the case of the US, data for individual countries belonging to NATO are included only for the years 1955-56 or 1956-57. When available, data for other major producers of the Free World which do not belong to NATO also are included for the same years. Data on the US are given

for every year shown and always are included in the total for countries belonging to NATO.

2. Sources and Reliability.

Unless otherwise indicated by a source note, data on the Sino-Soviet Bloc represent ORR estimates contained in the ORR Central Estimates File as of 1 April 1958. To provide a central source for up-to-date reference data, the ORR Central Estimates File contains economic estimates which are contributed by the responsible ORR analysts and revised regularly. Some of these estimates are provisional. The wealth of statistical data contained in the economic handbooks which have been issued by various countries of the Sino-Soviet Bloc during the past year has increased the reliability of data contained in the 1958 Handbook compared with that of previous issues. Unless otherwise indicated, figures quoted on plans for 1960 are taken from official Sino-Soviet Bloc sources.

Data on countries belonging to NATO were selected from the most reliable and most current sources available. In general, these sources are unclassified publications of the UN and of the Organization for European Economic Cooperation (OEEC) and official statistical publications of the countries concerned. Reasonable care was exercised in selecting the sources, but CIA does not assume responsibility for their accuracy. A list of the principal sources used is included in this volume.

The omission of a country from a table indicates that information was not available as to the existence or the amount of production. When it is known that there was no production in a country of the Sino-Soviet Bloc, this fact is stated in a footnote. Such a statement is not made in regard to countries belonging to NATO, because the

^{*}The USSR, Communist China, North Korea, North Vietnam, Albania, Bulgaria, Czechoslovakia, East Germany, Hungary, Poland, and Rumania.

^{**}The US, Belgium, Canada, Denmark, France, Greece, Iceland, Italy, Luxembourg, the Netherlands, Norway, Portugal, Turkey, the UK, and West Germany. The Saar has been added as a separate political entity because its industrial production often is listed separately in the sources used.

sources used usually do not distinguish between the terms no production and na (not available).

3. Boundaries.

Because the Sino-Soviet Bloc is a relatively new political area and because significant boundary changes have occurred during the past 25 years, comparability of data becomes an important problem. Unless otherwise indicated, the boundaries of the countries listed are those presently in force, and the data for earlier years have been adjusted accordingly.

4. Time Series.

No attempt has been made in compiling the 1958 Handbook to adjust time series to take account of such problems as homogeneity of the product and consistency of reporting systems. Those inconsistencies which are known are indicated in footnotes to the individual tables.

5. Rounding.

With the exception of a few tables, the data in the 1958 Handbook are rounded to three significant digits. The term *Negl*. (negligible) indicates that some production is known to exist but that the amount is too small to be significant.

6. Totals.

Totals for countries of the Sino-Soviet Bloc and members of NATO are simple additions of unrounded data and may not always agree with the sum of the rounded figures shown for the individual countries. No adjustment is made to compensate for gaps in information. Totals are omitted, however, if the missing data are believed to represent a significant proportion of the total production. Estimated world totals are included only when the estimates are available in the sources employed and when they do not conflict with the summation of the other data used.

Budget surplus	26.7	24.8	23.1	22.4	12.6	16.3	15.5

[•] An appropriate ruble-dollar ratio is not available to express the budget in terms of US dollars. It would be misleading to convert the rubles to dollars at the official rate of exchange of 4 rubles to 1 US dollar. An idea of the importance of the budget in the national economy is seen by the fact that the 1955 expenditure of 539.5 billion rubles is about 42 percent of the GNP at market prices.

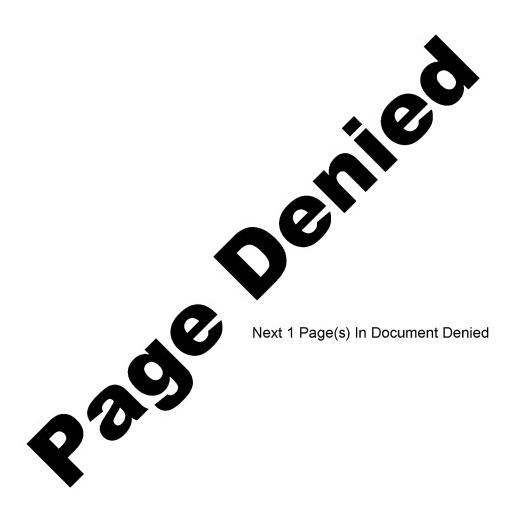

b Including return of surplus working capital.

c Including (1) compulsory bond purchases by the population in annual mass loan campaigns, (2) voluntary bond purchases by the population at savings banks, (3) bond purchases by banks investing the net increase in savings deposits, and (4) bond purchases by the state commercial insurance organization investing part of its reserves.

^d Figures in parentheses are estimates.

[•] Fictitious items consist of revenues which would have been realized if retail and agricultural procurement prices had not been changed and are offset by corresponding entries under budget expenditures.

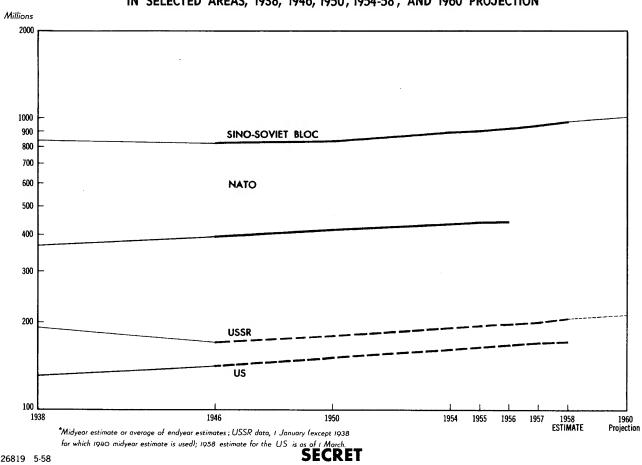

Including loan service payments to savings banks as well as to the population.

^{*} Including workers 12 years of age or older in the USSR, workers 15 to 64 in the European Satellites, workers 14 years of age or older in the US, and total labor force including armed forces in the other NATO countries. For details regarding the number of armed forces included, see the following footnote. Data refer, in the case of the Sino-Soviet Bloc, to the annual average employment in nonagriculture and midyear or end-of-year employment in agriculture and, in the case of the NATO countries other than the US, to midyear estimates. Data for the US refer to annual averages of monthly data.

^b Excluding Denmark, Iceland, Portugal, and Turkey. For countries other than the US, armed forces are included. In 1954 the armed forces made up 2,805,800 of the total labor force of those countries; in 1955, 2,733,500.

[•] Including unemployed.

d Man-years.

^{*} Excluding Iceland and Turkey (1957). The 1938 figure includes all Germany. Data refer to total production at generating centers (therefore including transmission losses) except for Canada (1956), Denmark and the UK (1957), Greece (1938-50), and Iceland (all years), which include production by enterprises generating primarily for public use. For further information regarding data for these countries, see individual country listing.

b Preliminary.

[•] Figures are gross estimates based on reported net, adjusted to include private industrial producers. These figures are, therefore, a more realistic comparison with Sino-Soviet Bloc areas, which have been reporting on a gross basis.

d Estimate.

[•] Production by enterprises generating primarily for public use.

^t Year beginning 1 April of year stated.

Approximately 95 percent of total production.

h Approximately 88 percent of total production.

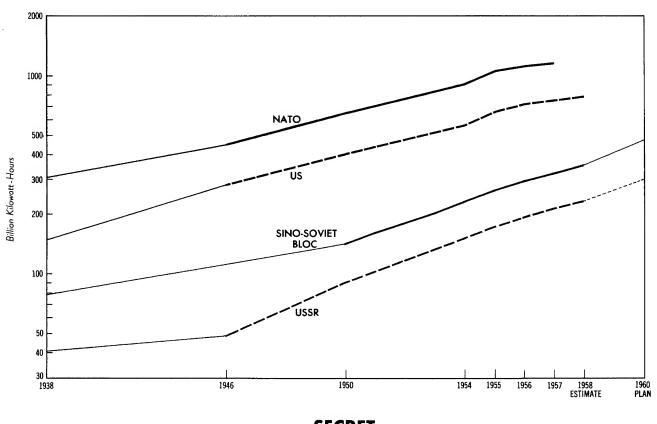

i Approximately 90 percent of total production.

Year ending 30 September of year stated.

^{* 10} months.

East Germany	6,000	2,200	
Hungary	4,600	3,215	
Poland	6,000	2,000	
Rumania	6,500	3,300	

^o Excluding Iceland and Luxembourg. Production of hard coal only is included for Belgium, Norway, the Saar, and the UK; production of brown coal and lignite only is included for Denmark and Greece.

- d Estimate based on the 1962 plan.
- Estimate based on the 1961 plan.
- 1 Partly French and partly Communist Vietnam.

b Million metric tons of standard fuel. The average calorific values used to convert to standard fuel of 7,000 kilocalories per kilogram are listed below. Computations for standard fuel were not carried out for pre-1952 data, because to do so, using these same values, would be misleading. In most countries, there has been a deterioration in the quality of coal since 1938 which has resulted in lower calorific values. Because the trend has not been uniform it would be very difficult to arrive at the appropriate calorific values to be used for years before 1952.

^{*} Excluding Denmark, Greece, Iceland, Luxembourg, Norway, and Portugal. The 1938 total includes all Germany. Data exclude breeze coke in all countries except Italy and the Netherlands.

^b Preliminary.

[•] Including coke made in byproduct coke ovens installed in gas works (1938-54 only).

^d No production in Albania.

[•] Plan.

¹ 1937.

^{*} Including some high-temperature brown coal coke used for metallurgical purposes, estimated at 180,000 tons in 1955 and 200,000 tons in 1956 and 1957.

h Excluding gas coke.

¹ Including breeze coke.

i Year ending 30 June of year stated.

^k Production of the Linz cokery only.

[•] Excluding Denmark (1938 and 1956), Greece, Iceland, Luxembourg, Norway, and Turkey (1938, 1950, and 1954). The 1938 total includes all Germany. Data refer to residual fuel oils only, excluding road oil and special products. Data for West Germany in 1938 and for the Netherlands and Denmark in all years include distillate fuel oils; data for Italy in all years include diesel oil.

^b Preliminary.

[•] No production in North Korea or North Vietnam. Including production from indigenous and imported natural crude oil and from synthetic sources.

d Including distillate fuel oils.

[•] Excluding quantities used at refineries and lost.

^{&#}x27; Including fuel used at the refineries.

Exports only.

b Excluding Albania, Communist China, India, and the USSR.

Excluding Denmark, Greece (except 1938), Iceland, the Netherlands, Portugal (1938 and 1950), and Turkey (1938). Data refer to the gross amount of marketable iron ores in the state in which they leave the mines, including manganiferous ores but excluding pyrites. Metal content of ore in the NATO countries and other Free World countries is as follows: Austria, Luxembourg, the UK, and West Germany, 30 percent; Belgium and France, 35 percent; Yugoslavia, 45 percent; Italy, Portugal, Spain, and the US, 50 percent; Algeria, Canada, and Japan, 55 percent; Sweden, 60 percent; and India, Norway, Turkey, and Venezuela, 65 percent.

^b Excluding manganiferous ores containing 5 percent or more of manganese.

c No production in Albania. Metal content of ore in the Sino-Soviet Bloc countries is as follows: USSR, commercial grade; East Germany, 26 to 28 percent; Hungary, 30 percent; Czechoslovakia, 34 percent; Poland, 35 percent; Rumania, 45 percent; and Bulgaria, Communist China, and North Korea, 50 percent.

^d The iron content of crude ore production varies from 33 to 58 percent; however, the figures given here are in terms of 50 percent.

^{• 1937.}

f Shipments.

Including ferro-titanium.

[.] h 10 months.

i Including iron sand.

Including France, Greece, Italy, the US, and West Germany. The 1938 total includes all Germany.

^b Dried equivalent of crude ore.

[•] Shipments.

^d No production in Albania, Bulgaria, Czechoslovakia, East Germany, or Poland.

[•] Production in Communist China should be called "aluminous raw materials" rather than bauxite because some nonbauxite ores have been included. For example, production in China in 1938 was from shale, not bauxite. Non-bauxite sources of alumina are being developed in the Sino-Soviet Bloc and probably will become important.

f Exports.

^{*} Including sulfur from all sources.

^b Excluding Belgium, Denmark, Iceland, Luxembourg, the Netherlands (all years); and the UK (1954–56). All sulfur produced in the NATO countries other than the US and Italy (see country footnotes) is from pyrites.

[•] Although most sulfur produced in the US is elemental sulfur, the following amounts were produced from pyrites: 1938, 222,000 tons; 1950, 399,000 tons; 1954, 412,000 tons; 1955, 406,000 tons; 1956, 439,000 tons; and 1957, 427,000 tons.

^d Preliminary.

[•] All sulfur produced in the Sino-Soviet Bloc countries, with the exception of about 100,000 tons annually in the USSR and 60,000 to 100,000 tons annually in East Germany, is from nonelemental sulfur sources such as pyrites, gypsum, waste gases, and kieserite.

^f Minimum production was 244,000 tons; actual production probably was higher.

About 90,000 to 100,000 tons annually is elemental sulfur.

and noncentrifugal) 47,300	49,400							

Raw value, centrifugal sugar. Refined sugar is equal to approximately 90 percent of raw sugar by weight. Centrifugal sugar, as distinguished from noncentrifugal, includes cane and beet sugar produced by the centrifugal process, which is the principal kind moving in international trade. Both cane and beet sugar are included where produced.

• 1935-39 average.

d Preliminary. Centrifugal and noncentrifugal sugar.

• No production in North Korea. h 1937-41 average.

i 1934-38 average.

f 1937.

Some countries listed also produce a large amount of noncentrifugal sugar. Noncentrifugal sugar includes all types of sugar produced by other than the centrifugal process. The estimates include such kinds known as piloncillo, panelo, papelon, chancaca, rapadura, jaggery, gur, muscovado, panocha, and the like, used largely for consumption in the relatively few areas where produced. Production by a few of these countries follows:

Non	centrif	uaal	Sugar

[•] Unless otherwise noted, data for the Free World refer to total weight of cotton yarn made for sale, including yarn spun from cotton waste and excluding mixed yarn and tire cord yarn. In the case of the Sino-Soviet Bloc, data refer to total factory production.

^b Excluding Iceland and Luxembourg (all years); Denmark (1957); and Greece (1956-57). The 1938 total includes all Germany in 1937. The 1957 total includes 10 months' data for Turkey. From 1954 on, data for Turkey include government production only, which in 1952 was approximately 53 percent of total production. For further detail on the type of yarn included, see individual country listing below.

[·] Preliminary.

d Including mixed yarn (1938-54). Data for 1955-56 were estimated by the International Cotton Advisory Committee from the amount of raw cotton used. The 1957 figure was estimated in February 1958.

[•] Estimate.

¹ No production in Albania.

Prewar average.

ь 1945.

i 1937.

Including mixed yarn.

^{*} Including tire cord yarn.

Government production only.

m 10 months.

[•] Corn pickers produced in the US may not be compared directly with corn harvesting combines produced in the Sino-Soviet Bloc. The Bloc combine picks up and chops the corn stalks in addition to picking the ears from the stalks; the US corn picker leaves the corn stalks in the field.

ь 1939.

[°] No production in countries of the Sino-Soviet Bloc which are not listed. Information for Communist China (1954–57) and for Rumania (1950 and 1954–57) is not available.

d 1937.

[•] Plan.

b 1939.

[°] No production in countries of the Sino-Soviet Bloc which are not listed. 1957 information for Czechoslovakia is not available.

d Plan.

West Germany	481	155	963	929	1,000	1,230	

[•] Data refer to total gross register tonnage of all merchant vessels of 100 gross tons or more which were launched excluding those which are non-self-propelled. Although tonnage launched is not strictly comparable to tonnage constructed as used in Table 93, data in Table 93 and this table may be compared where only rough accuracy is required.

^b Only European Satellites whose outputs are significant percentages of total European Satellite construction are listed.

[·] Including floating cranes.

b Preliminary.

^o Excluding Greece, Iceland, Luxembourg, and Turkey.

NATO COUNTRIES

- Including the UK and the US. Data include diesel-electric locomotives.
- b Data refer to units put in service on first class railroads.
- ° No production in countries of the Sino-Soviet Bloc which are not listed. Information for Bulgaria, East Germany, and Rumania in 1957 and for Poland in 1956 and 1957 is not available.

b Including Belgium (1938 and 1946), Canada, Denmark (except 1938 and 1946), France (excluding electric locomotives), Italy (including self-propelled cars), the UK (1935 instead of 1938), the US, and West Germany (1950). Because of lack of data for West Germany, totals for NATO are not presented for years after 1950. Data refer to the output of railways and private shops for domestic use and export. Locomotives include all railway types regardless of gauge or form of power but exclude mining and industrial locomotives and, unless otherwise noted, self-propelled cars.

[•] NATO data are based on census or registration numbers of civilian vehicles in the years for which those figures are available; for other years the officially estimated number of vehicles in use is shown. Unless otherwise noted, Bloc data are for civilian vehicles as of the end of the year. Because of the lack of complete data, Sino-Soviet Bloc totals have been omitted.

^b The 1955 total includes late 1954 estimates for Belgium and Greece. The 1956 total includes 1955 data for Iceland, Portugal, and Turkey and 1954 data for Greece.

o Including buses.

d 1939.

[•] As of 1 January. Including trucks, tractors, and trailers held by Ceskoslovenske Automobilova Doprava (Czechoslovak Bus and Trucking Co.).

As of 1 January of year stated.

Late 1954 estimate.

h Including 15,800 road tractors for 1955 and 17,700 road tractors for 1956.

[•] Because of the difficulty of determining valid exchange rates, data are not presented in terms of a common currency. Instead of rates which would be appropriate to apply to the construction industry, the following official exchange rates are listed here merely to give a general idea of the value of the foreign currencies. These rates should be used with caution, as they have been arbitrarily established and maintained.

		Units of Bloc Cur-		
Country	Currency	rency per US\$

^{*} End-of-year estimates. Data for the Sino-Soviet Bloc refer to telephone subscribers, including both private and civil governmental (other than military) users. Data for NATO refer to telephones in use, including both public and private telephones which can be connected to a central exchange. The number of subscribers is less than the number of telephones in the same country, but no reliable ratio between the two can be supplied.

b 1937 except for the US, for which 1938 data are used.

c 1952

^d Data refer to the number of telephone subscriber lines and are indicative only of the total number of telephones in use.
